Aftercare Maintenance for Clear Coat Lacquers

Regular attention in looking after decorative lacquered surfaces helps maintain its original lustre.

We recommend using a specially selected cloth supplied by us to wipe away surface contaminants from delicate surfaces.

Each unique cloth delivers its own great results without the use of harsh chemicals or cleaning products. The ultra-fine fibres found within the cloths help lift and hold dirt and grease with just a little added water.

Use: ‘Luxury Duster Cloth’ - TT069 (40cm x 40cm)

The main purpose of a clear coat lacquer is to seal, protect (against wear), and retard tarnishing and oxidisation on some metal alloy finishes. Penetration of the lacquered layer can cause exposure of the metal alloy underneath; which then incurs tarnishing and oxidisation. A clear coat lacquer is applied to protect the metal alloy finish; however the clear coat lacquer can still be accidentally chipped or severely scratched. Extra care and attention must be taken during installation, and general everyday handling.

Instructions:

The cloth is made of high-quality microfibre suede. Firstly moisten one part of the cloth; then simply wipe over to remove surface contaminants; then buff off very gently with a dry part of the cloth to complete the process. All that’s needed is a very gentle wipe from time to time and the clear coat lacquer will remain clean and vibrant.

Cleaning the surface with harsh chemicals, ammonia based detergents, or contact with solvent based adhesives can violate the clear coat lacquer; creating exposure of the metal alloy underneath.

Surfaces that are prone to high levels of moisture or water must be wiped or buffed gently with the ‘Luxury Duster Cloth’ immediately after use. Do not allow water to dry on the lacquered surfaces. Water droplets can sometimes leave white mineral stain deposits once dried; making it difficult to remove later on. A mild non-ammoniated cleaning detergent can be used to remove mineral stains; then rinse off with plenty of water, wipe dry, then buff gently afterwards with the cloth.

The ‘Luxury Duster Cloth’ is machine washable; and should be done regularly to maintain performance. Conditioners, softeners, or bleach should not be used as these will affect the cloths performance.

IMPORTANT:

- Grit or a hard piece of debris lodged in any of the cloths fibres may scratch if wiped directly onto any surface. Ensure cloths are stored in their original packaging when not in use, and washed/ replaced regularly.
- All finishes are for decorative applications and must be treated with the utmost care and attention whilst installing, handling, and cleaning.
- Do not clean lacquered surfaces with harsh chemicals, or ammonia based detergents. Contact with solvent based adhesives can violate the clear coat lacquer; creating exposure of the metal alloy underneath.
- Decorative lacquered surfaces that come into contact with water, acidic drinks, soft drinks, or alcohol, must be cleaned and wiped with the appropriate cloths immediately.

Ordering:

When ordering please use the following product descriptions:

- Luxury Duster Cloth - TT069
