Aftercare Maintenance for Copper Plated Alloys

Regular attention in looking after decorative copper plated surfaces helps maintain its original lustre.

We recommend using a specially selected cloth supplied by us to wipe away surface contaminants from delicate surfaces.

Each unique cloth delivers its own great results without the use of harsh chemicals or cleaning products. The ultra-fine fibres found within the cloths help lift and hold dirt and grease with just a little added water.

Use: ‘Luxury Duster Cloth’ - TT069 (40cm x 40cm)

Copper plated alloy finishes are subject to tarnishing and oxidising; therefore it is necessary to apply a clear coat lacquer to retard tarnishing and oxidisation. However, in some cases it is not required to have a clear coat.

Copper is a soft metal that can be easily scratched and extra care and attention must be taken during installation and for general everyday handling. Surfaces that are contaminated with oxide and tarnishing, grease and oil from fingerprints and atmospheric residue must be wiped or buffed gently with the ‘Luxury Duster Cloth’.

Instructions:

The cloth is made of high-quality microfibre suede. Firstly moisten one part of the cloth; then simply wipe over to remove surface contaminants; then buff off very gently with a dry part of the cloth to complete the process. All that’s needed is a very gentle wipe from time to time and the copper alloy will remain clean and vibrant.

Surfaces that are prone to high levels of moisture or water must be wiped or buffed gently with the ‘Luxury Duster Cloth’ immediately after use. Do not allow water to dry on the copper plated alloy surfaces. Water droplets will cause tarnishing; leaving dark stain deposits once dried; making it difficult to remove later on. A mild soap cleaning detergent can be used to remove mineral stains; then rinse off with plenty of water, wipe dry, then buff gently afterwards with the cloth.

The ‘Luxury Duster Cloth’ is machine washable; and should be done regularly to maintain performance. Conditioners, softeners, or bleach should not be used as these will affect the cloths performance.

IMPORTANT:

• Grit or a hard piece of debris lodged in any of the cloths fibres may scratch if wiped directly onto any surface. Ensure cloths are stored in their original packaging when not in use, and washed/ replaced regularly.
• All finishes are for decorative applications and must be treated with the upmost care and attention whilst installing, handling, and cleaning.
• Decorative copper plated alloy surfaces that come into contact with water, acidic drinks, soft drinks, or alcohol, must be cleaned and wiped with the appropriate cloths immediately.

Ordering:

When ordering please use the following product descriptions:

• Luxury Duster Cloth - TT069
